

Overview

This Job Aid defines the steps to follow for creating and maintaining enterprise calendars.

There are two types of calendars. The first, Enterprise Calendar, defines the typical working days per week and the second, Resource Calendar, defines exceptions for additional non-working time for a specific resource. At a minimum, a single Enterprise Calendar is required to define organisational work time and the exceptions for company-wide non-work time such as statutory holidays. Resource Calendars will be utilised as needed to over-ride the enterprise calendar on a resource-by-resource basis. Therefore, there are two specific actions for maintaining calendars:

1. Create and maintain Enterprise Calendars
2. Create and maintain Resource Calendars

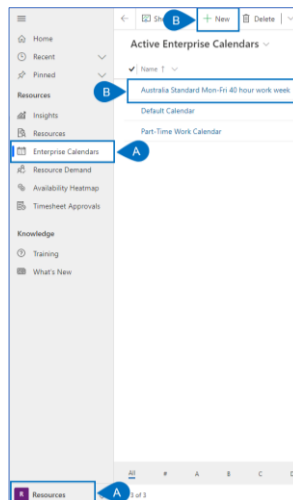

Create and maintain Enterprise Calendars

 Resource Manager

 Resources

1. CREATE AND MAINTAIN ENTERPRISE CALENDARS

- a. Ensure you are in the **Resources area**, click **Enterprise Calendars** in the **Resources** section.
- b. Click **+ New** from the command bar to create a **new enterprise calendar** or **select and edit** an existing calendar to make changes to an **existing enterprise calendar**.

- c. Ensure the **calendar's name** clearly **defines the working time** defined by the calendar.
- d. Toggle on/off the typical working days for a week.
- e. Define the number of working hours per day.
